Original image by Pixel Perfect Images. SketchUp is a simple, free CAD software program that enables users to digitally design and construct architectural models. _SketchUp by Minolta and Pixologic LLC._ # Chapter 16: Geographical Information Systems (GIS) In the last chapter, we learned about applications that allow us to manipulate raster images. In this chapter, we'll take the next step by looking at a new type of imaging data called Geographic Information Systems or GIS. Geographical data has been collected about our environment for generations. These data are used by engineers and cartographers to create maps and illustrate spatial trends, such as population density and road coverage. We've all seen national maps that show us all the states, counties, and cities in the U.S., or a map of North America that highlights places such as mountains, rivers, and lakes. Today, GIS data is used to determine how many units are in a neighborhood or how much food is grown in a particular area. GIS data can tell us whether it's safe to swim in a particular lake or what type of houses are near a school campus. It's used to analyze or visualize everything from the microcosm—our bodies—to the macrocosm—our world. Every time you use the internet, you use a GIS system: When you search something like "sushi, philly, or fan forums," GIS data is used to determine how many hits each search term returned. This data is used by advertising and marketing companies to determine where to place their new ads. It's used by governments to determine where to build new facilities and what types of services and products they should offer. In this chapter, we'll look at GIS at its most basic and at its most detailed. We'll learn about the basic types of GIS data, the key differences between 2D and 3D data, and how it can be used for many types of purposes. # GIS Terminology Your GIS data will look like a collection of geometric objects. They may be points, lines, or polygons. Most data is represented as polygons, or closed areas. Points are used to create lines or borders, and lines are used to create shapes, such as polygons. The data itself isn't geographic or "geographic," although it's often visualized in a geographic context. Computer technology enables us to

As well as a worrying lack of diversity, the offensive has been highly criticised by groups including the London School of Jewish Studies, the Royal Holloway University of London and the Jewish Board of Deputies. In an open letter to the Liberal Democrat leadership, the executive director of the Jewish Board, Paula Zackin, said her organisation was "deeply concerned by the limited and highly problematic range of core party members of ethnic minority backgrounds". "With this in mind, we remain deeply concerned that Lord Oakeshott is a core member of the Liberal Democrats," she wrote. "As a former Conservative, he would have been an asset to the campaign to curb anti-Semitism in the party and the country and to promote tolerance, respect and equality." The letter adds that the Board believes there is a "risk of establishmentarianism within the party" and a "potential for more anti-Semitism" in a party which is not "a diverse party".

The competition is still raging in the Gran Turismo series, and as we have been introduced to new cars and locations all over the world in 2013, we are now hearing news of the newest addition to the series as the Macan Cup race will be taking place in Macau. Starting from Saturday, September 8th, Formula 1 fans can get up close and personal with their favorite teams and drivers in the Macan Cup virtual race, the biggest and most diverse sporting event in the series so far. "Macan Cup" race enthusiasts can relive the excitement of the race using their PlayStation 3 by playing it in the "Macan Cup" special virtual track, which will include new points such as overtaking maneuvers, corner braking and corner cutting. If you happen to miss the big race on TV or want to re-create it, head over to the PlayStation Network to see if you can be the best virtual racer this year. The Macan Cup race will be available on September 1st for PlayStation Plus members to play and is free to download. [via Niconico] at the edge of a forbidden region. We are able to extend our theoretical analysis, developed in [Romero-Bermudez:2018vkw], to this case. [3]: For a more detailed analysis on the possible UVs of the inflaton, see [Baumann:2009tn]. [4]: See the appendix for a more detailed analysis on the vev of the inflaton in the case of quadratic potentials. [5]: See for example [Wetterich:2008gra] and references therein. [6]: Notice that we are considering here the more conventional mass term rather than the soft breaking mass. [7]: Notice that in the case in which one considers a light field ϕ_L with a quadratic potential, the first condition in Eq. will be approximately fulfilled due to the presence of a tachyonic direction and therefore the strong B -term does not get generated. On the other hand, this case corresponds to the case in which the direction M_{ϕ^2} of the scalar mass matrix is approximately tachyon free and in this case the vev of the field ϕ_L is generated at some level.
