In 2017, a new AutoCAD 2019 desktop app was released for Windows 10 and macOS users. Release date Notes Notes Released December 1982 as desktop app for microcomputers with internal

---

graphics controllers (PCL) and an optional low-cost external graphics controller (later called a graphics tablet). March 1986, version 1.0.3 - first release for microcomputer platforms with the option to connect to the PCL board via a serial port for 1,200 bps. February 1988, version 1.5.1 - the first revision of AutoCAD that supported multiple simultaneous users. January 1991, version 1.6.1 - supports anti-aliasing of polygons and smooth beveling of lines. November 1991, version 1.6.2 - first release for the Macintosh platform. October 1992, version 1.6.3 - first release on DOS systems. October 1994, version 2.0 - the first release to support the Windows 3.x series of operating systems. May 1997, version 2.0.1 - supports natively running on Windows 95 and Windows 98. May 1998, version 2.1 - the first release on Windows NT and Windows 2000. September 1998, version 2.1.2 - supports screen magnifiers and custom screen zooms. June 2000, version 2.1.3 - supports screen magnifiers and custom screen zooms. January 2001, version 2.1.4 - supports both thin and thick bevels for lines and polylines. November 2002, version 2.1.4 - supports linework anti-aliasing. December 2003,

---

version 2.1.4 - supports user-defined color and fill styles, as well as display options. December 2004, version 2.1.5 - the first release to support the Windows XP series of operating systems. January 2005, version 2.1.5 - the first release to

### AutoCAD

In 2011 the Autodesk Exchange platform was redesigned to include AutoCAD. References External links Category:Architectural design Category:Computer-aided design software Category:AutoCADQ: How to get the previous input sequence in javascript I have an array of different keys that I want to iterate over. Each key can have a new action added when the user clicks on it. I currently have a function that add's the action and it works fine: function addAction(userInput, inputElement, action, actionId) { \$(inputElement).on('click', function() { \$('#'+actionId).val(userInput).trigger('change'); }); } My issue is that I have to keep track of which key has been clicked because I have other functions that need to know when a key is clicked in order to add the same action to the

---

previous user input. I am currently doing something like this:

```
var previousKeys = []; var keyId; function addAction(userInput, inputElement, action, actionId) { if(previousKeys.indexOf(actionId)!== -1) { addAction(userInput, inputElement, action, actionId); } else { $(inputElement).on('click', function() { keyId = inputElement.id; previousKeys.push(keyId); $('#'+actionId).val(userInput).trigger('change'); }); } } 
```

Is there a better way of doing this? I am not sure if this is a good solution or not. A: Just store the value in an array and after looping, remove the corresponding id from it, like this:

```
var previousKeys = []; function addAction(userInput, inputElement, action, actionId) { if(previousKeys.indexOf(actionId)!== -1) { ca3bfb1094
```

---

## AutoCAD

After activation you can use a license key. This key can be found on page 2 of the document, below the release date (default value is 2010).

1) Enter the key provided by Autodesk into the registration form and press "Register" button. 2) After registration, login to Autodesk and you can select an industry for licensing. 3) Download and save the file. Q: D3.js transition

path.LinearGradient fill opacity I have this code:

```
var path = d3.selectAll('path') .data(data)
  .enter() .append('path') .attr("d",
d3.svg.symbol().type(d3.symbolTypes[type])
.size(b)) .style('stroke', function(d, i) { return
color(i); }) .style('fill', function(d, i) { return
linearGradient(i, '100%', '0%', '100%', '0%'); })
```

but I'm getting this error: Uncaught TypeError: Object [object Object] has no method 'replace', I know that when I fill linear gradient, there's no need to specify the opacity property, but I want it to be like that. A: You're calling replace on a single element (the result of the .enter()) but d3 is a library which works on a set of elements, not on a single one. Instead, use d3.selectAll(...)

---

and access properties of the returned selection. Here is your updated code: `var path = d3.selectAll('path').data(data).enter().append('path').attr("d", d3.svg.symbol().type(d3.symbolTypes[type]).size(b)).style('stroke', function(d, i) { return color(i); }).style('fill', function(d, i) { return linearGradient(i, '100%', '0%', '100%', '0%'); });` See the API for more

### **What's New in the AutoCAD?**

Rapidly send and incorporate feedback into your designs. Import feedback from printed paper or PDFs and add changes to your drawings automatically, without additional drawing steps.
